Key resources in forestry from CSIRO PUBLISHING

Forest Conservation Genetics Principles and Practice

Andrew Young, David Boshier & Timothy Boyle

Forest Conservation Genetics draws together much previously uncollected information relevant to managing and conserving forests. The content emphasises the importance of conserving genetic diversity in achieving sustainable management.

ERRSTVATOR CONSERVATOR DE LA C

Each chapter is written by a leading expert and has been peer reviewed. Readers without a background in genetics will find the logical sequence of topics allows easy understanding of the principles involved and how those principles may impact on day-to-day forest planning and management decisions.

Diseases and Pathogens of Eucalypts PJ Keane, GA Kile, FD Podger & BN Brown

Over the last fifty years, there has been an increasing recognition that eucalypts are vulnerable to a wide range of diseases. They have suffered destructive epidemics, particularly of dieback caused by the cinnamon fungus in native forests, of foliar diseases and cankers in plantations, and of dieback of remnant trees on agricultural and grazing land.

This has stimulated intensive research into the causes and management of diseases of the eucalypts. This work represents a comprehensive review of our current knowledge of the health and diseases of eucalypts.

WILDLAND

FIRE

International Journal of Wildland Fire

Published on behalf of the International Association of Wildland Fire.

International Journal of Wildland Fire is the world's only research journal devoted exclusively to topics related to wildfire. It publishes new and significant work from researchers working on fire-prone regions around the world and covers all aspects of fire behaviour, ecology, suppression, modelling and control.
